# Memory Game

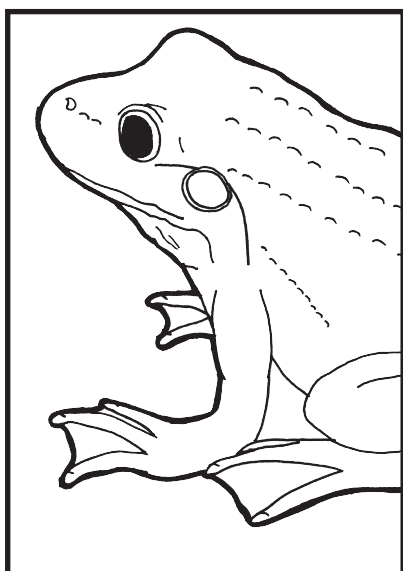

## CAT

- Introduced
- Predator
- Kills native animals
- Found all over Australia

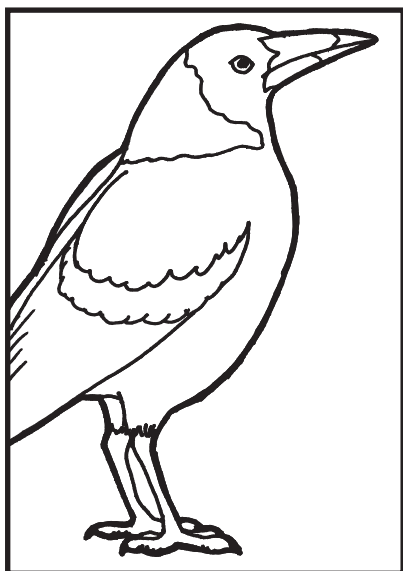

## FOX

- Introduced
- Predator
- Kills native animals
- Found all over Australia

## MOTORBIKE FROG

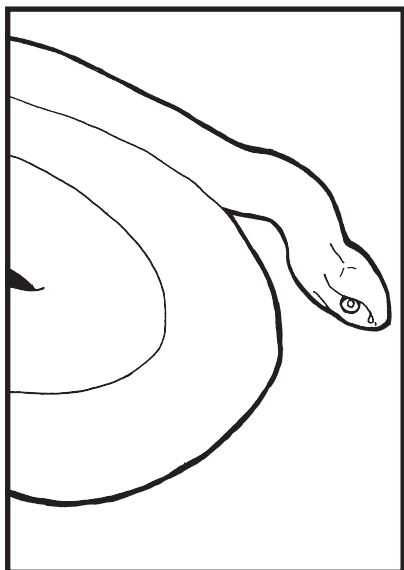

- Native amphibian
- Found around Perth
- Eats insects

## MAGPIE

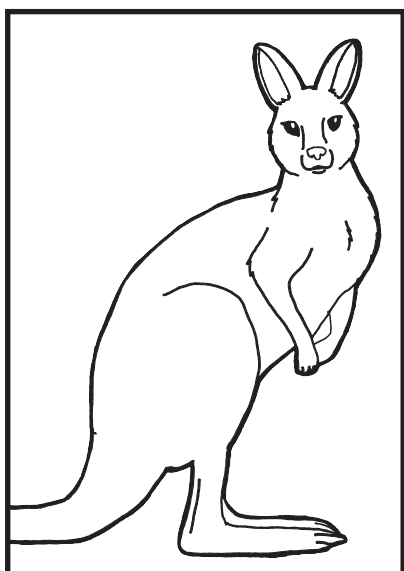

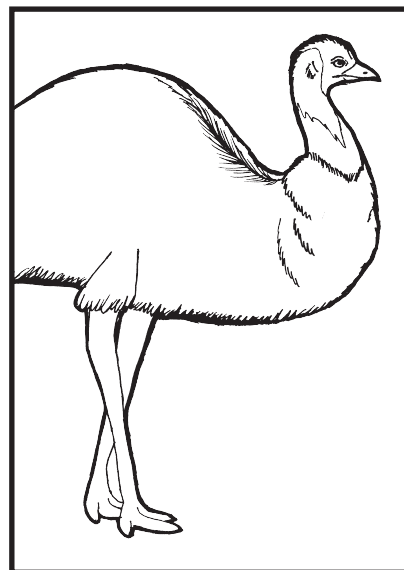

- Native bird
- Found in many gardens and bushland
- Eats insects

# Memory Game

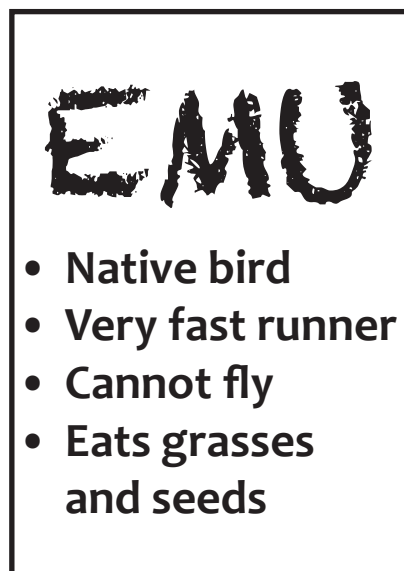

## SNAKE

- Native reptile
- Many different types, some venomous
- Eats a variety of prey

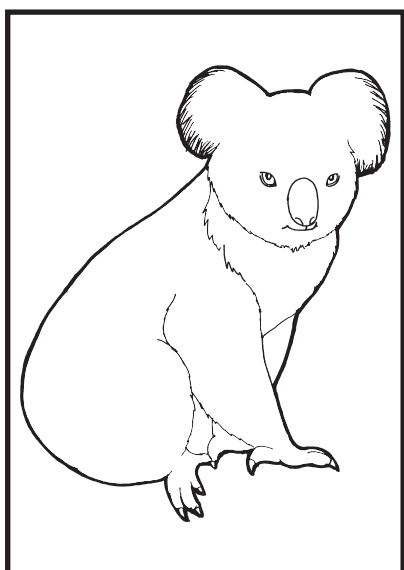

## KANGAROO

- Native marsupial
- Eats grasses and plants
- Found across Australia

## EMU

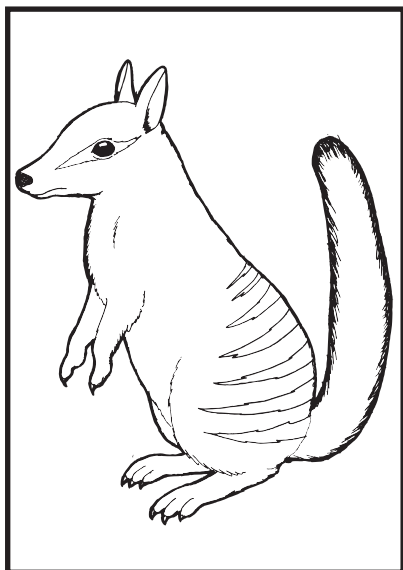

- Native bird
- Very fast runner
- Cannot fly
- Eats grasses and seeds

## KOALA

- Native marsupial
- Eats gum leaves
- Found in eastern states

# Memory Game

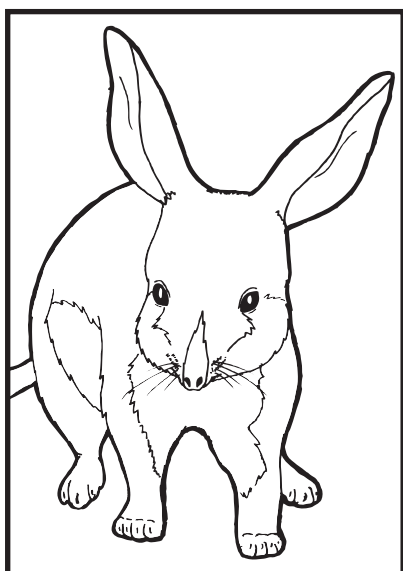

## NUMBAT

- Native marsupial
- Eats termites
- Found only in Western Australia

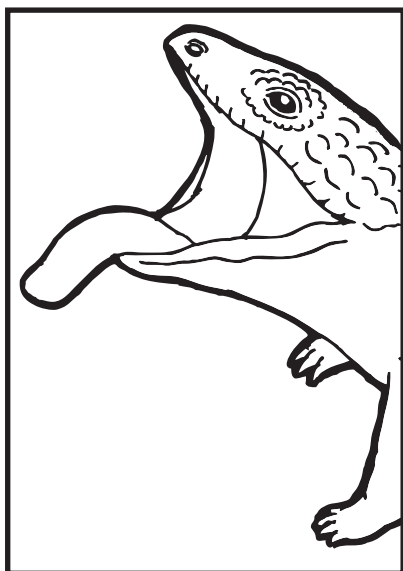

## BILBY

- Native marsupial
- Eats insects, seeds and fungi
- Found in central Australia

## QUENDA

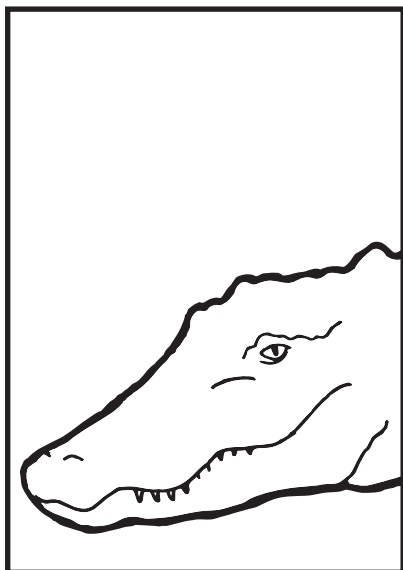

- Native marsupial
- Eats insects and fungi
- Found in Western Australia

## BOBTAIL

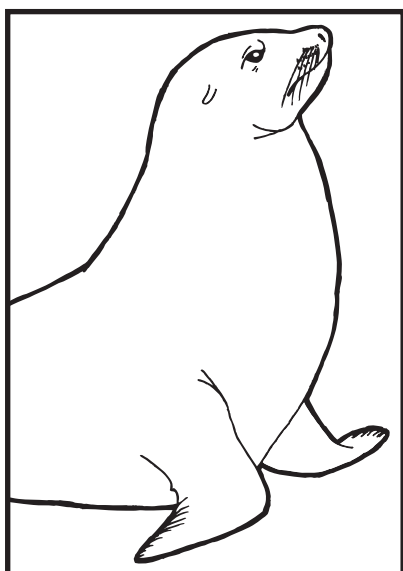

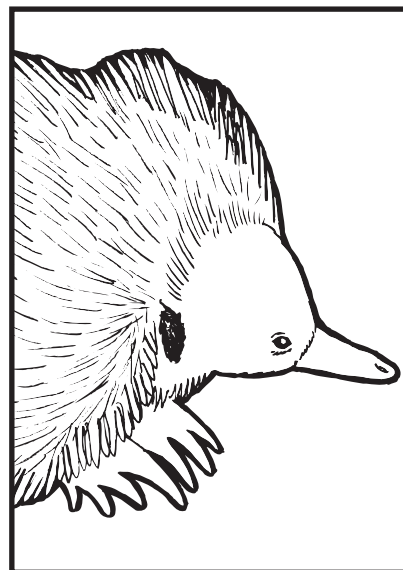

- Native reptile
- Eats insects, snails, slugs, flowers and fruit.
- Found around Australia

# Memory Game

## CROCODILE

- Native reptile
- Eats fish, crustaceans, sheep and cattle
- Found across northern Australia

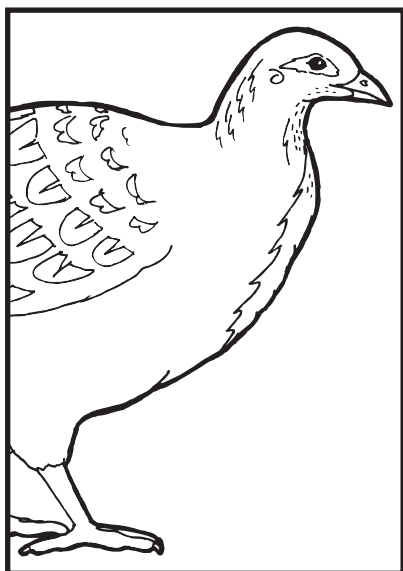

## FUR SEAL

- Native mammal
- Eats fish, squid and octopus
- Found in Australian waters

## ECHIDNA

- Native monotreme
- Eats ants and termites
- Found all over Australia

## MALLEEFOWL

- Native bird
- Eats seeds, flowers, fungi and insects
- Found across southern Australia

# Memory Game

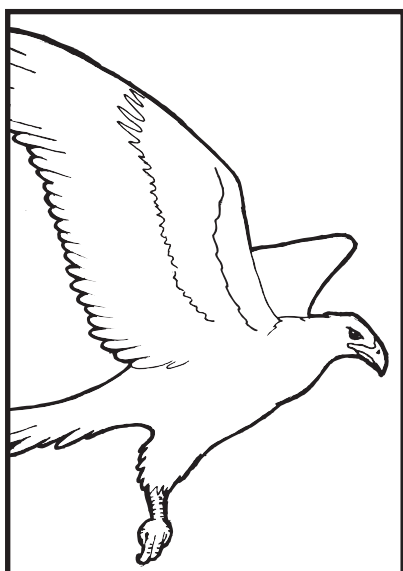

## PENGUIN

- Native bird
- Eats fish
- Found on the coasts of southern Australia

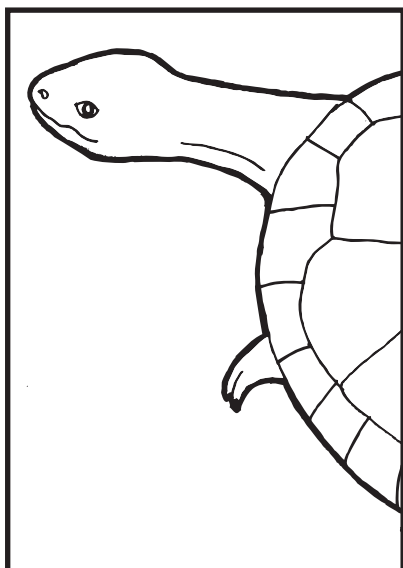

## POSSUM

- Native marsupial
- Eats leaves and flowers
- Found across Australia

## WEDGE-TAILED EAGLE

- Native bird
- Eats mammals and some reptiles
- Found across Australia

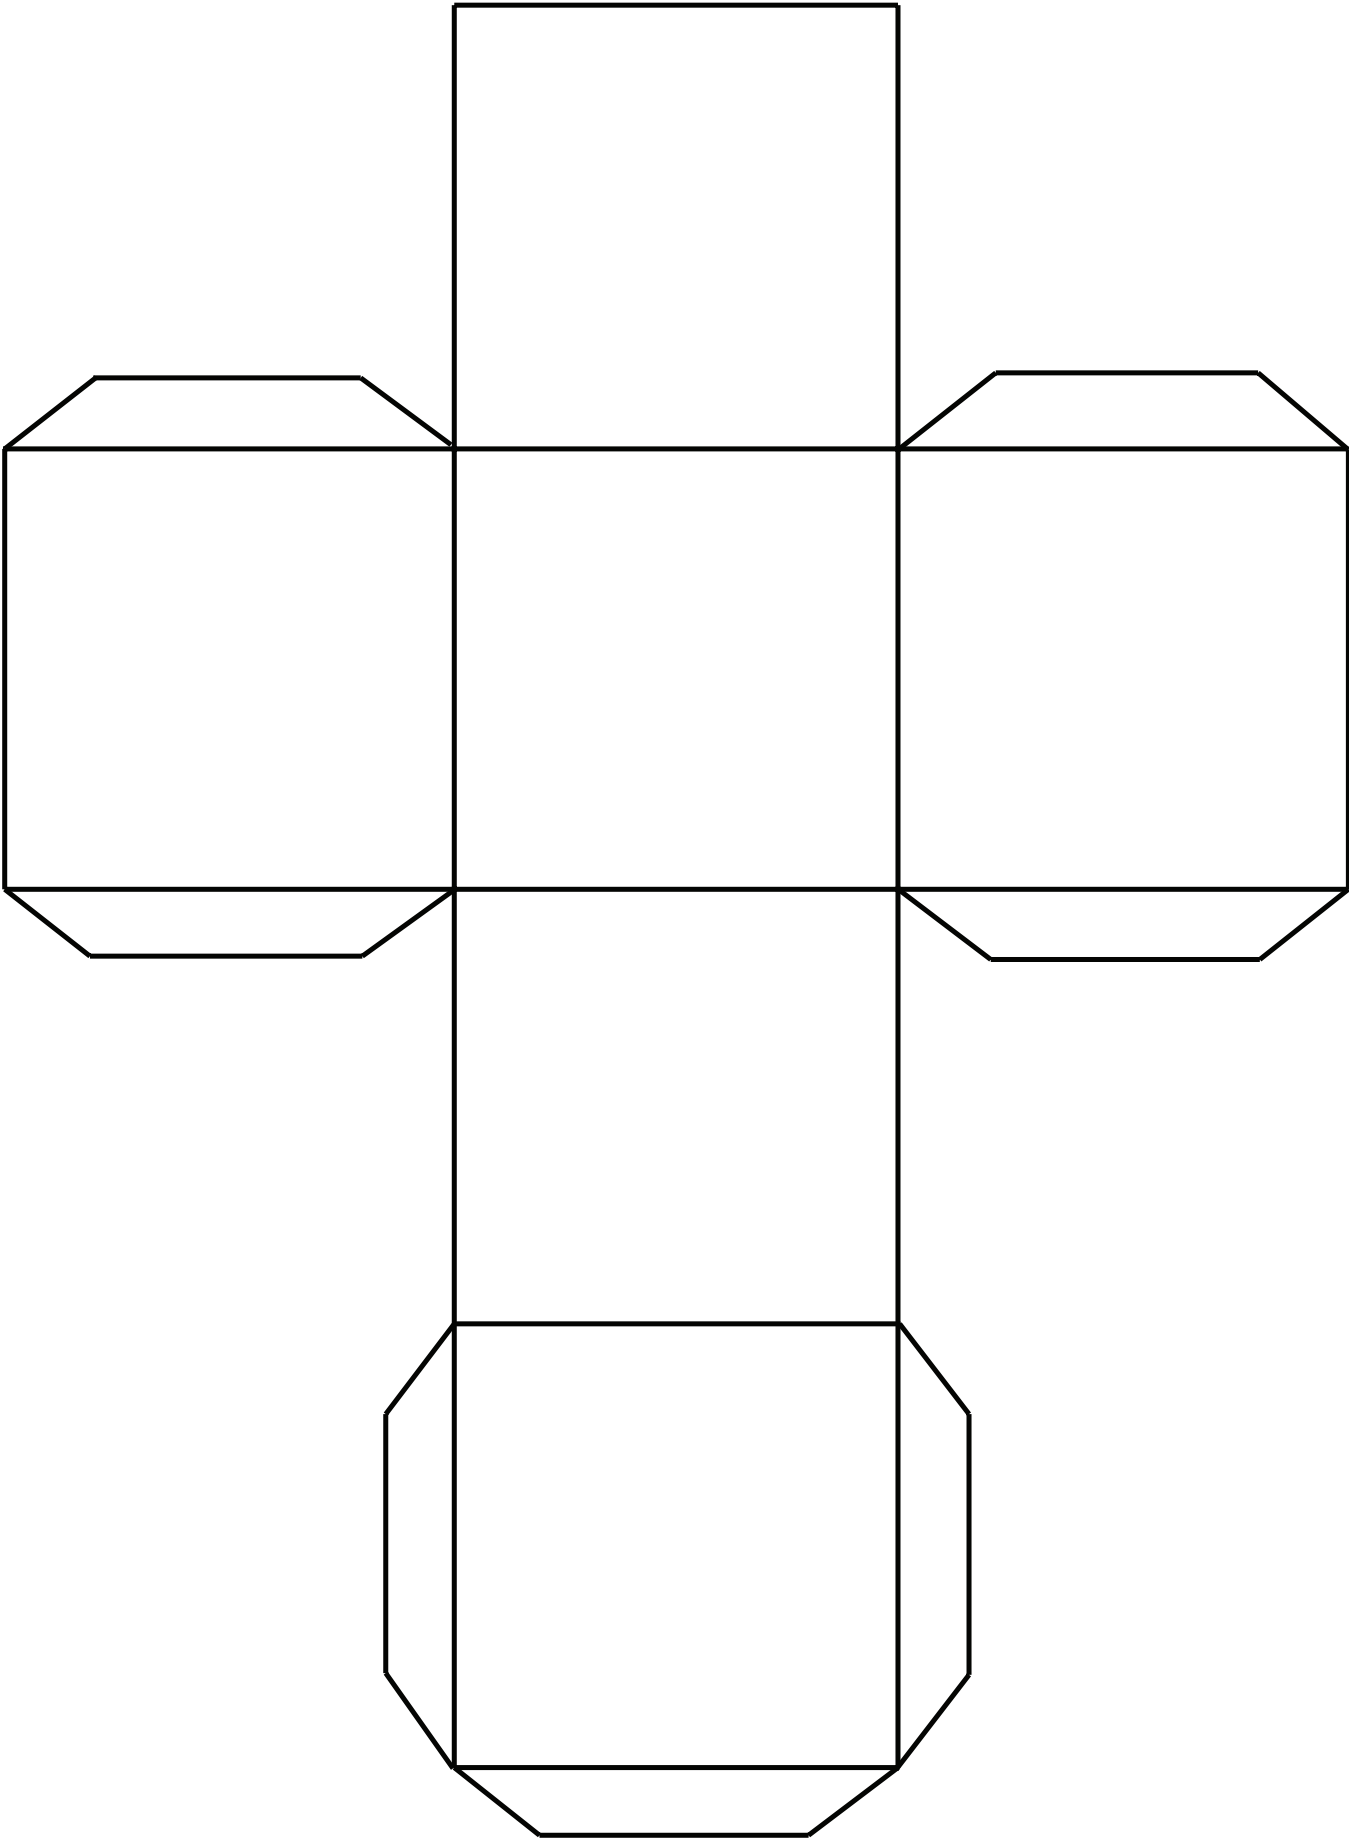

## OBLONG TURTLE

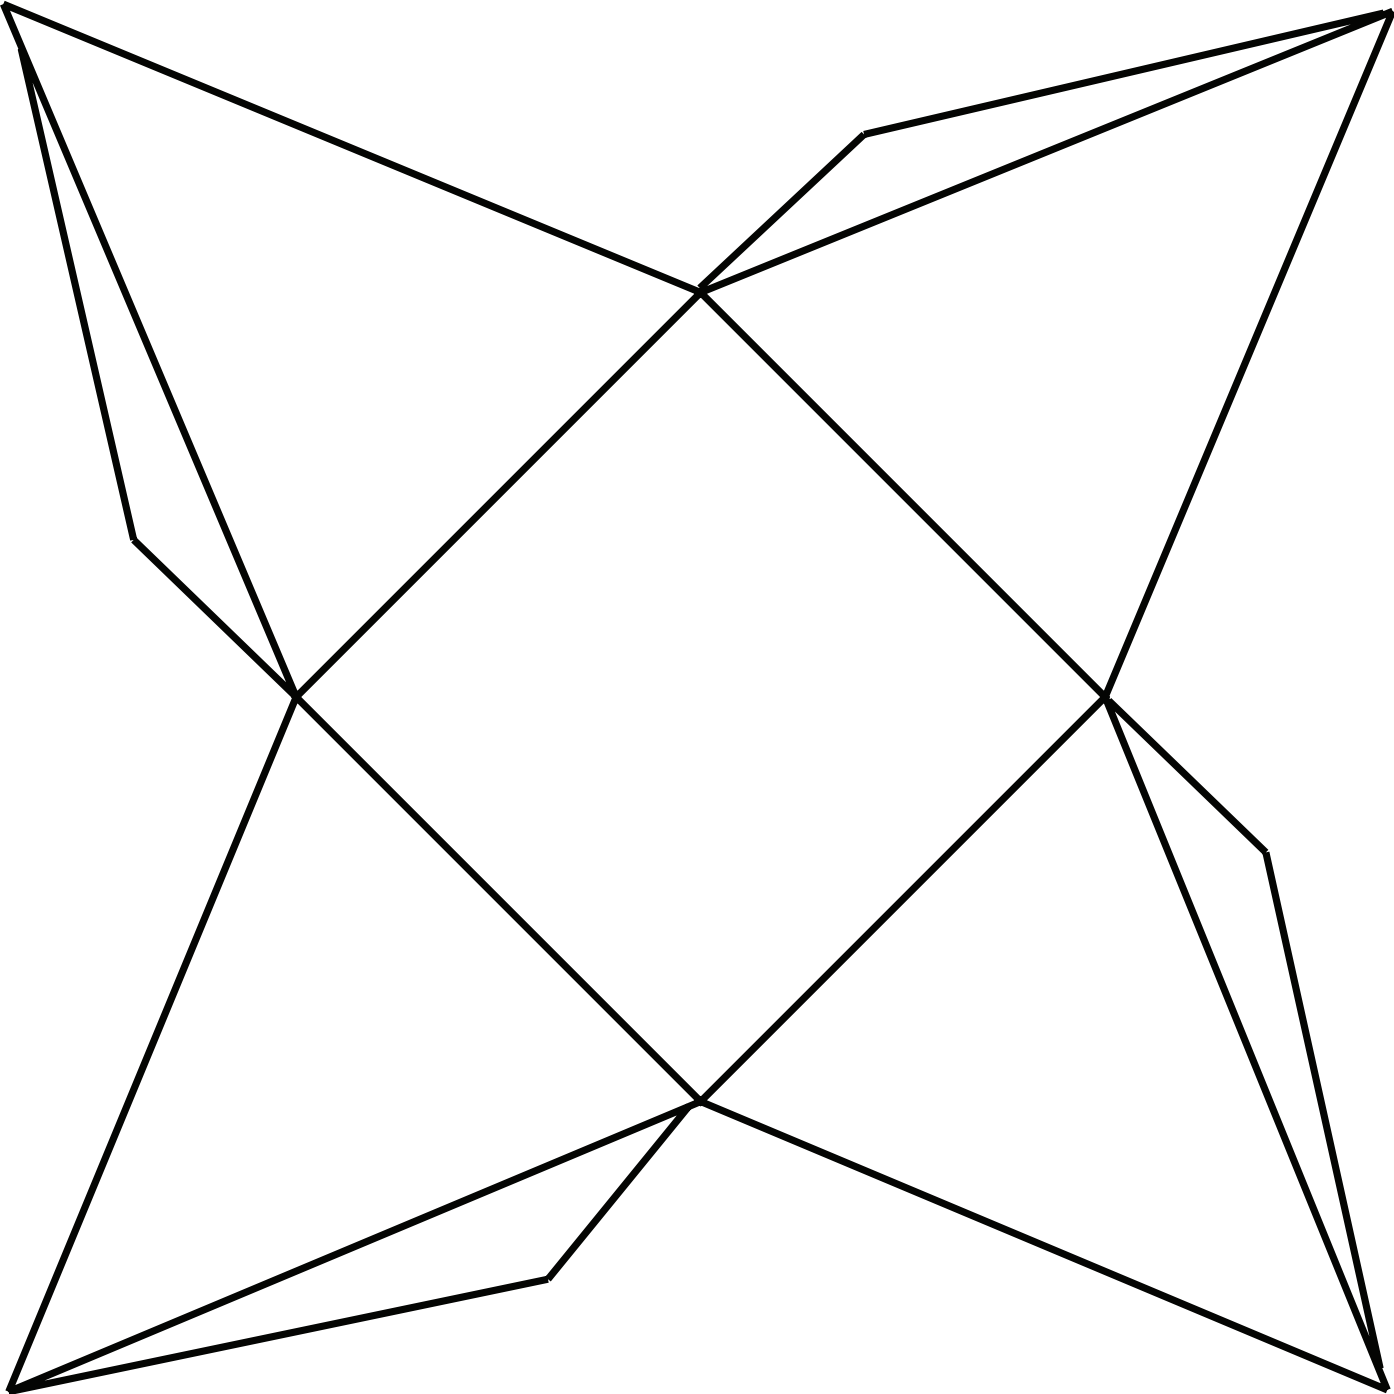

- Native reptile
- Eats fish, frogs and insects
- Found in the south-west of Australia

Nelly Numbat Says

# ALL About the Numbat

The Numbat is a mammal.

It has a small pointed head and small upright \_\_\_\_\_.  
It has four short legs with long claws and a long, bushy \_\_\_\_\_. It may be grey-brown to reddish in \_\_\_\_\_ with black and white banding on the back and rump. Numbats have a beige underbelly and a long back stripe across the \_\_\_\_\_ area.

The Numbat has a \_\_\_\_\_, sticky tongue that it uses to dip into in logs, leaf litter and in small holes in the ground to collect termites. The \_\_\_\_\_ only eats termites and nothing else. They don't even need to drink \_\_\_\_\_ as they get all the moisture they need from munching on \_\_\_\_\_.

Numbats are an endangered species. There are less than 1000 left living in the \_\_\_\_\_. Numbats are very vulnerable to predation by introduced species such as foxes and \_\_\_\_\_. They are also eaten by native reptiles and birds, but they have developed survival skills over time giving them some protection against these natural predators.
